

Camp Robinson SUA Woodlands Auto Tour

Fire is responsible for open, wildlife-friendly woodlands that feature striking wildflowers and inviting views.

The **Camp Robinson Special Use Area** (4,029 acres) is managed by the Arkansas Game and Fish Commission for field trials and hunting dog training. Oak, hickory and native pine forests flourish because of prescribed fire, and many native plants, including wildflowers, depend on periodic ground fires to grow. These planned ground fires reduce competition and stress among plants, and improve wildlife habitat. They also reduce the threat of catastrophic wildfires by reducing sticks and other litter in the forest.

We've learned that the natural force of fire is an important part of the recipe for our native wildlife and the habitats they require.

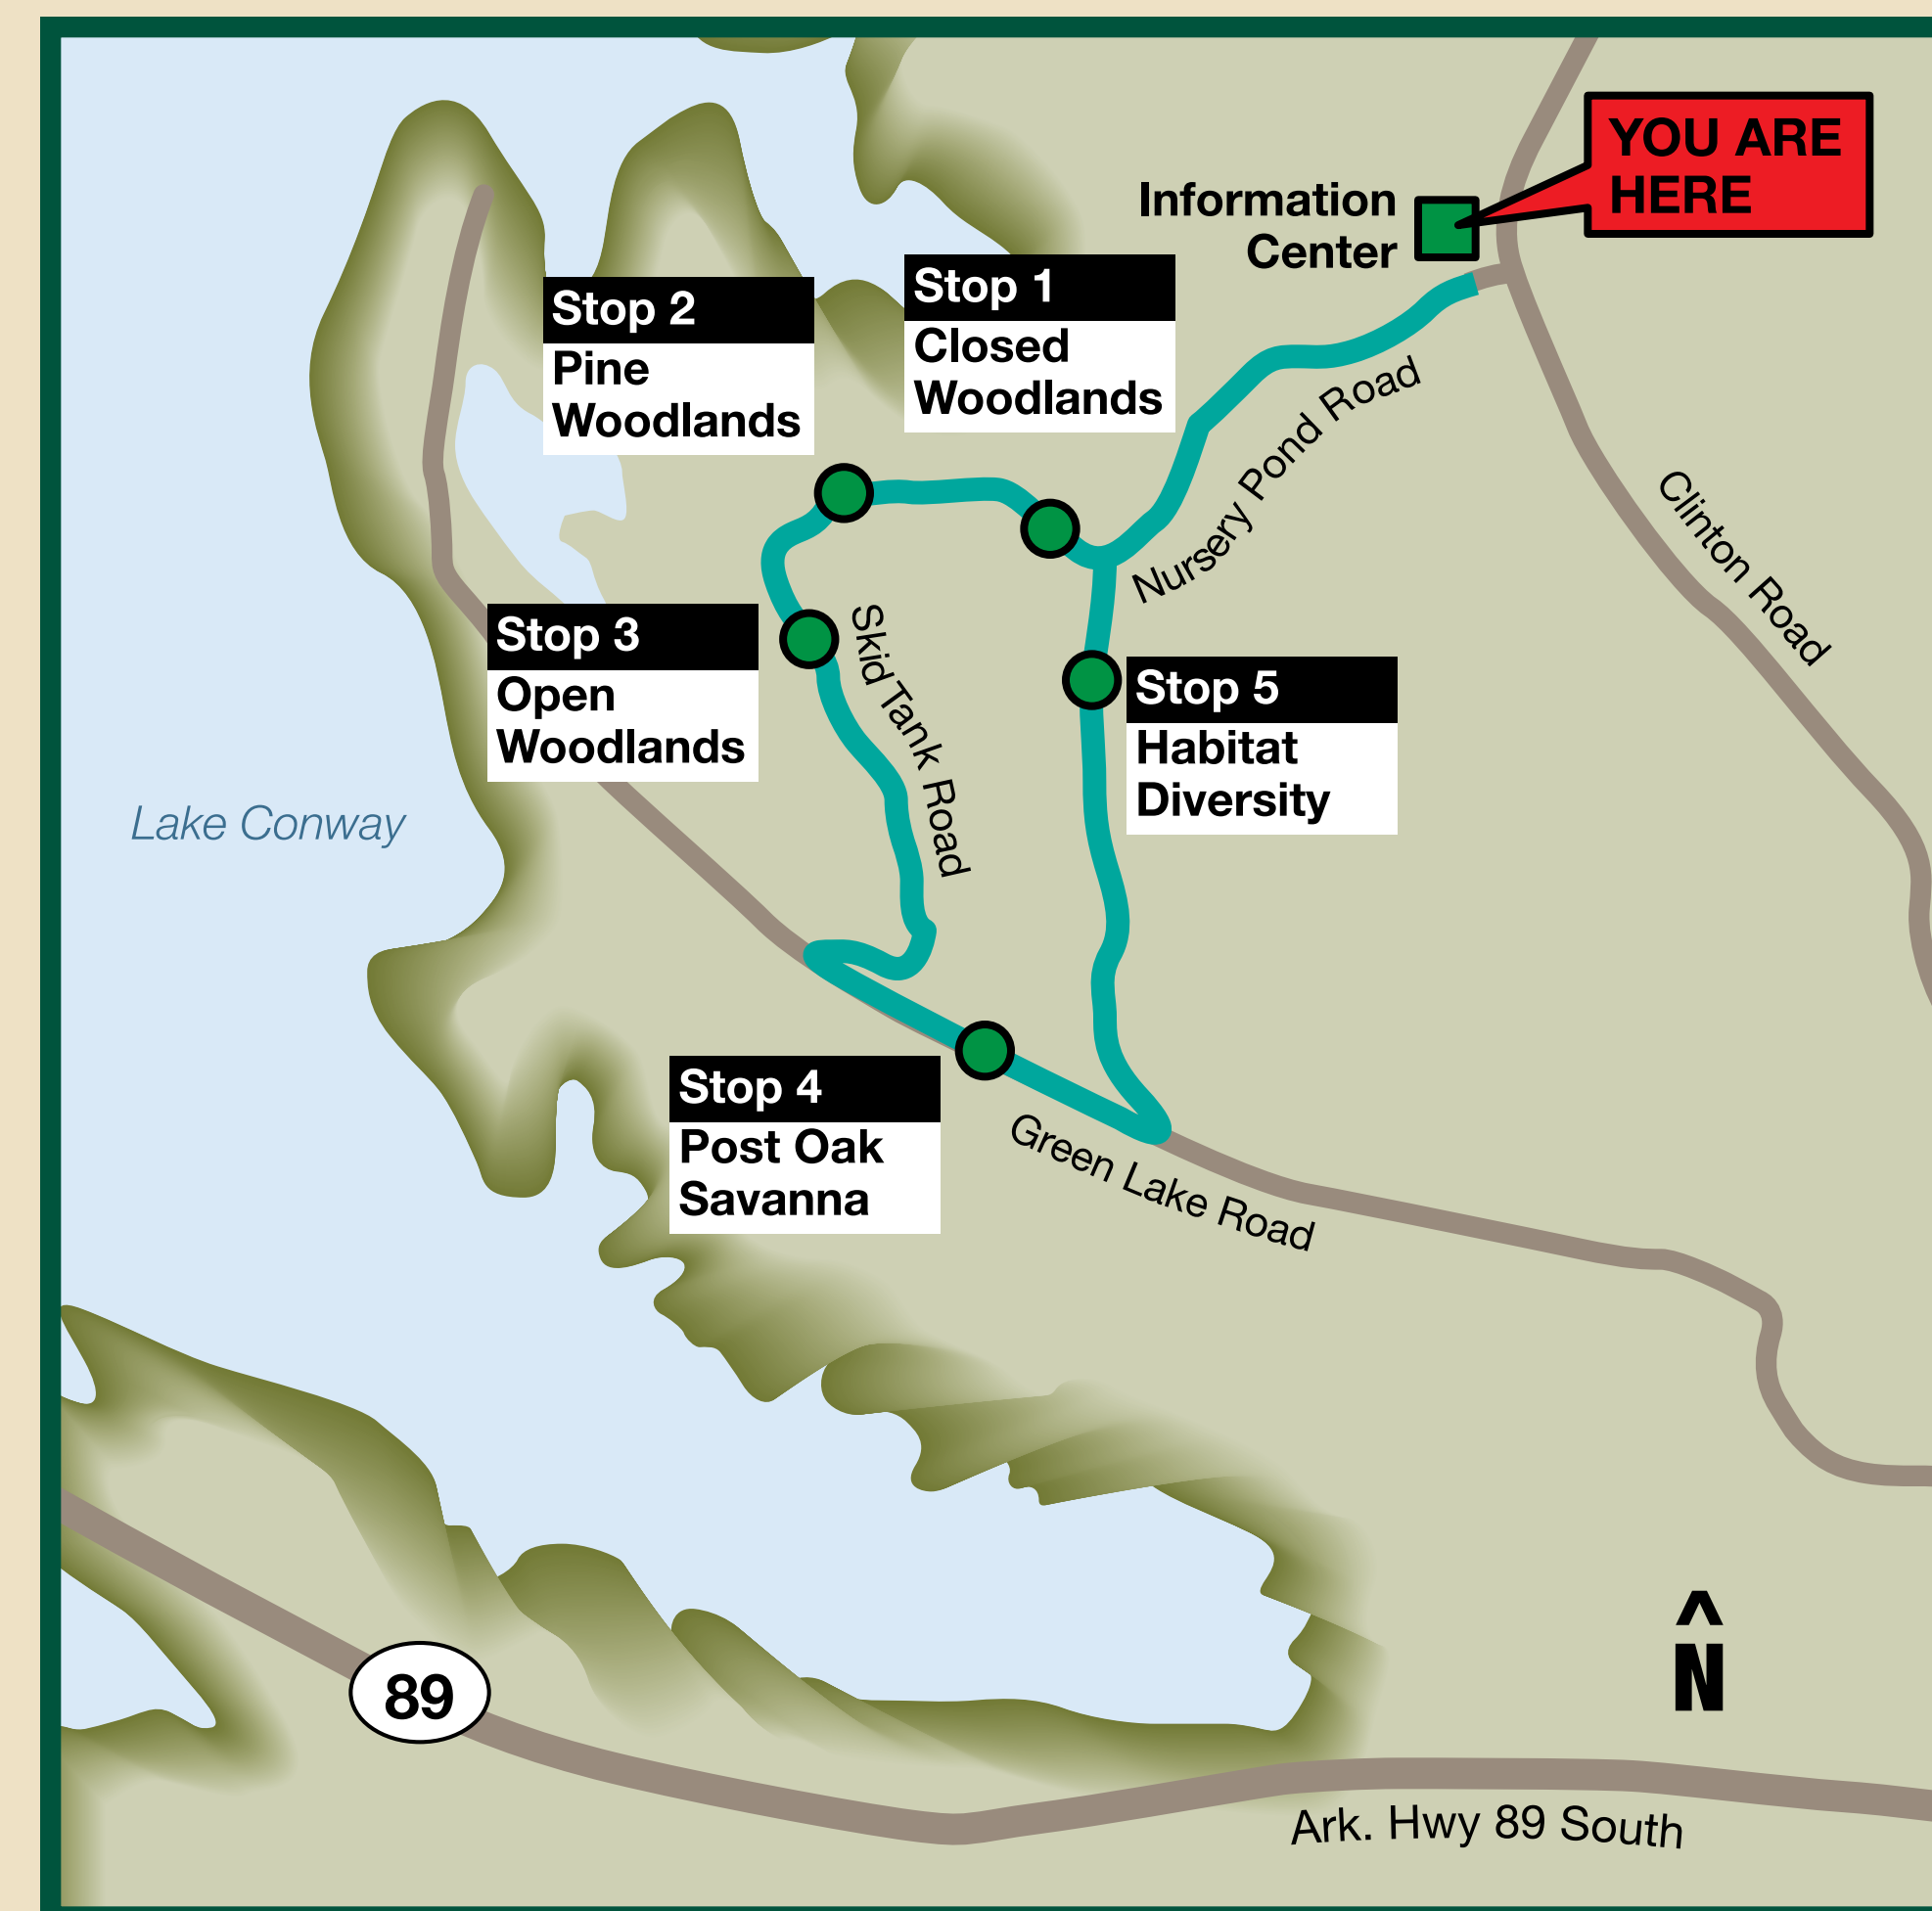

The AGFC's resource managers and conservation partners join forces to use fire for the habitat it helps provide across the state.

This upland area demonstrates decades of management promoting oak and pine woodlands and savannas once common across the state. This tour will vary by season – plants are dormant in winter and wildflowers bloom in spring. A winter visitor may find burned areas, but healthy growth will begin each spring.
